

W.J. SEPPINGS LTD, BECCLES

W.J. SEPPINGS MODERNISE

W.J. Seppings Butchers was established in 1919 and continues as a family business today supplying quality meat from the original shop. It is the oldest established butchers in Hungate, Beccles with highly trained butchers cutting and preparing the meat on the premises – they make over a ton and a half of sausages a week. The kitchens at the Hungate premises also make fresh pastry products daily: a wide range of savoury and fruit pies, quiches and hundreds of sausage rolls. Whenever possible all meat is sourced locally and Robert Sepping is keen to ensure his business promotes low food miles.

In April 2011 during a major re-fit at the Hungate shop. We completely stripped out the tired fixtures and fittings and replaced the shop front, flooring, ceiling & wall tiling to give the shop a new lease of life. New, modern Arneg Sydney chilled display counters for meat and Delicatessen items has changed the way product is displayed & has increased sales.

As part of these works the refrigeration engineer suggested that Robert Sepping replace his numerous old refrigeration motors with a multi-compressor pack system & remote condenser which would be far more efficient to run. The one system would run his walk-in chillers & freezers as well as the display cabinets on the shop floor. Robert, keen benefit from year on year financial saving and to keep his impact on the environment to a minimum, welcomed the proposal. This decision alone reduced their carbon emissions by nearly 40%.

W.J. Seppings Team of Highly Trained Butchers at Work

Since installing a **Heat Hog** our fuel bills have reduced dramatically & we are very happy with our investment would highly recommend!"

The **Heat Hog** was connected to the Robert's refrigeration plant, enabling the compressors to generate FREE hot water which can be used for food preparation as well as wash down & sanitisation. As you can imagine, with all that butchery & pastry production, the business consumes a lot of hot water during the course of a day. The installation consisted of the **Heat Hog** 300 Litre insulated water storage cylinder complete with a 6kw heat exchanger connected to the multi-compressor pack system. The new 300 Litre water cylinder provides water at 55°C as a pre feed to the existing water tank.

RETURN ON INVESTMENT:

Annual savings equate to 24,024kw and over 6 tonnes of carbon. The equivalent of planting 600 trees

The original payback was just over 3 years in 2011 when install. The savings today with the recent fuel prices increases have more than doubled the saving to over £6,000 per annum

HEATHOG BENEFITS:

- Reduced dependence on energy supply
- Reduced CO2 footprint and associated costs
- Greatly assists the carbon reduction commitment
 - Substantial reduction in energy bills
 - Improved company green credentials
 - Improved refrigeration plant efficiency
